Hypermedica telehealth platform

Hypermedica is an all-in-one telehealth collaboration platform designed to make healthcare providers work better and more efficiently.

Target Audience: Healthcare Professionals, Healthcare Providers, Provider Networks

Hypermedica

Platform
Web, PWA

Industry
Healthcare

Duration
2 years, ongoing

Challenges

Hypermedica contacted ORIL searching for engineering support in pursuit of accomplishing the goal to create a modern, simple, and easy-to-use platform for video chatting between patients and clinicians. The project aimed to transform the healthcare industry and increase access to quality healthcare, make it affordable to everyone, and deliver world-class customer service.

Our Project Roadmap

01 R&D. Research and Development.

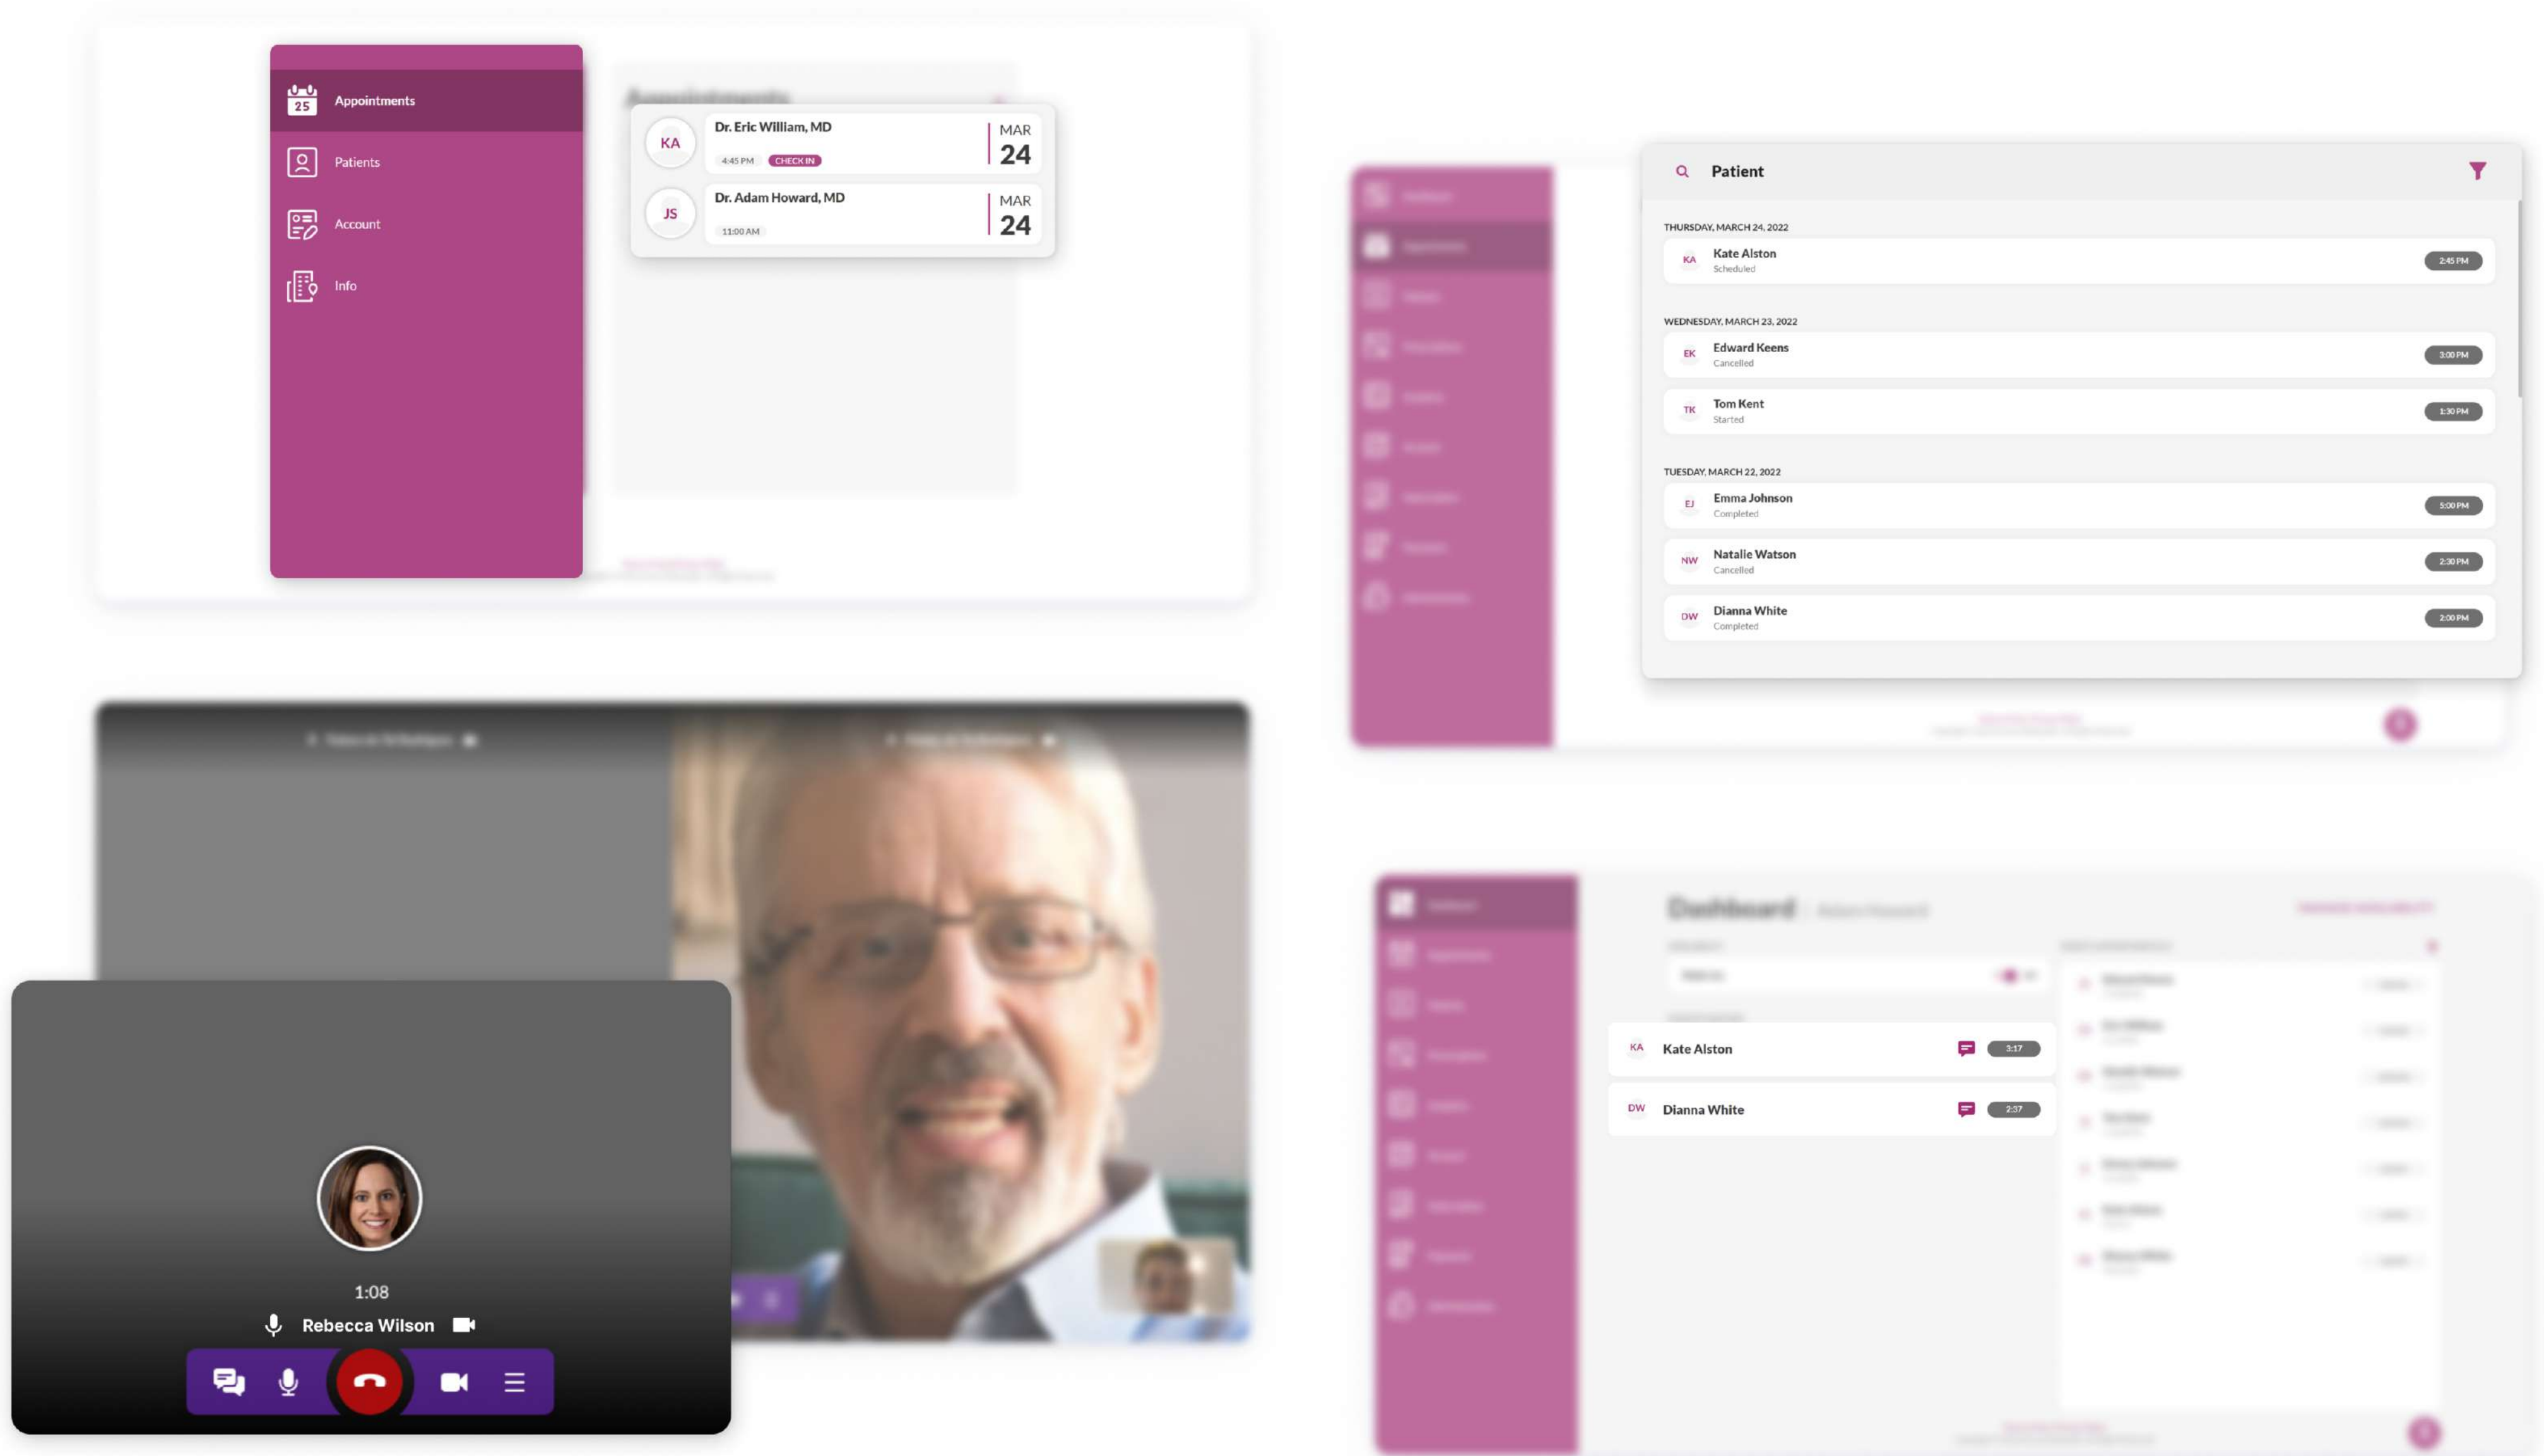

ORIL participated in researching the video conferencing technologies such as WebRTC (Web Real-Time Communication) to find the best ways for remote meetings implementation with ensuring security and reliability. Having done the initial preparations, clear expectations and goals were set.

02 MVP.

Using Agile methodology and Scrum framework the team fully implemented a basic set of planned features allowing quality confidential and secure connection between healthcare providers and their clients.

03 Post MVP. Ongoing development.

Assistance in the implementation of additional features and enhancements to improve user experience. Together the team developed features like screen sharing during the calls, chat messaging, adding additional participants (guests) to the call. Currently, we continue advancing the platform successfully.

Main Features

01 Provider Portal.

Separate portal for healthcare providers with easy and reliable registration options that allow clinicians to send simple visit invitations with or without the need for patient registration.

04 Prescriptions.

Prescriptions are sent electronically to the pharmacy of a patient's choice.

02 Patient Portal.

Patients can securely access history of appointments, payments, documents, prescriptions and more.

05 Right now appointments.

No appointments needed to be scheduled beforehand. Patients can sign in to the account and go straight to the waiting room.

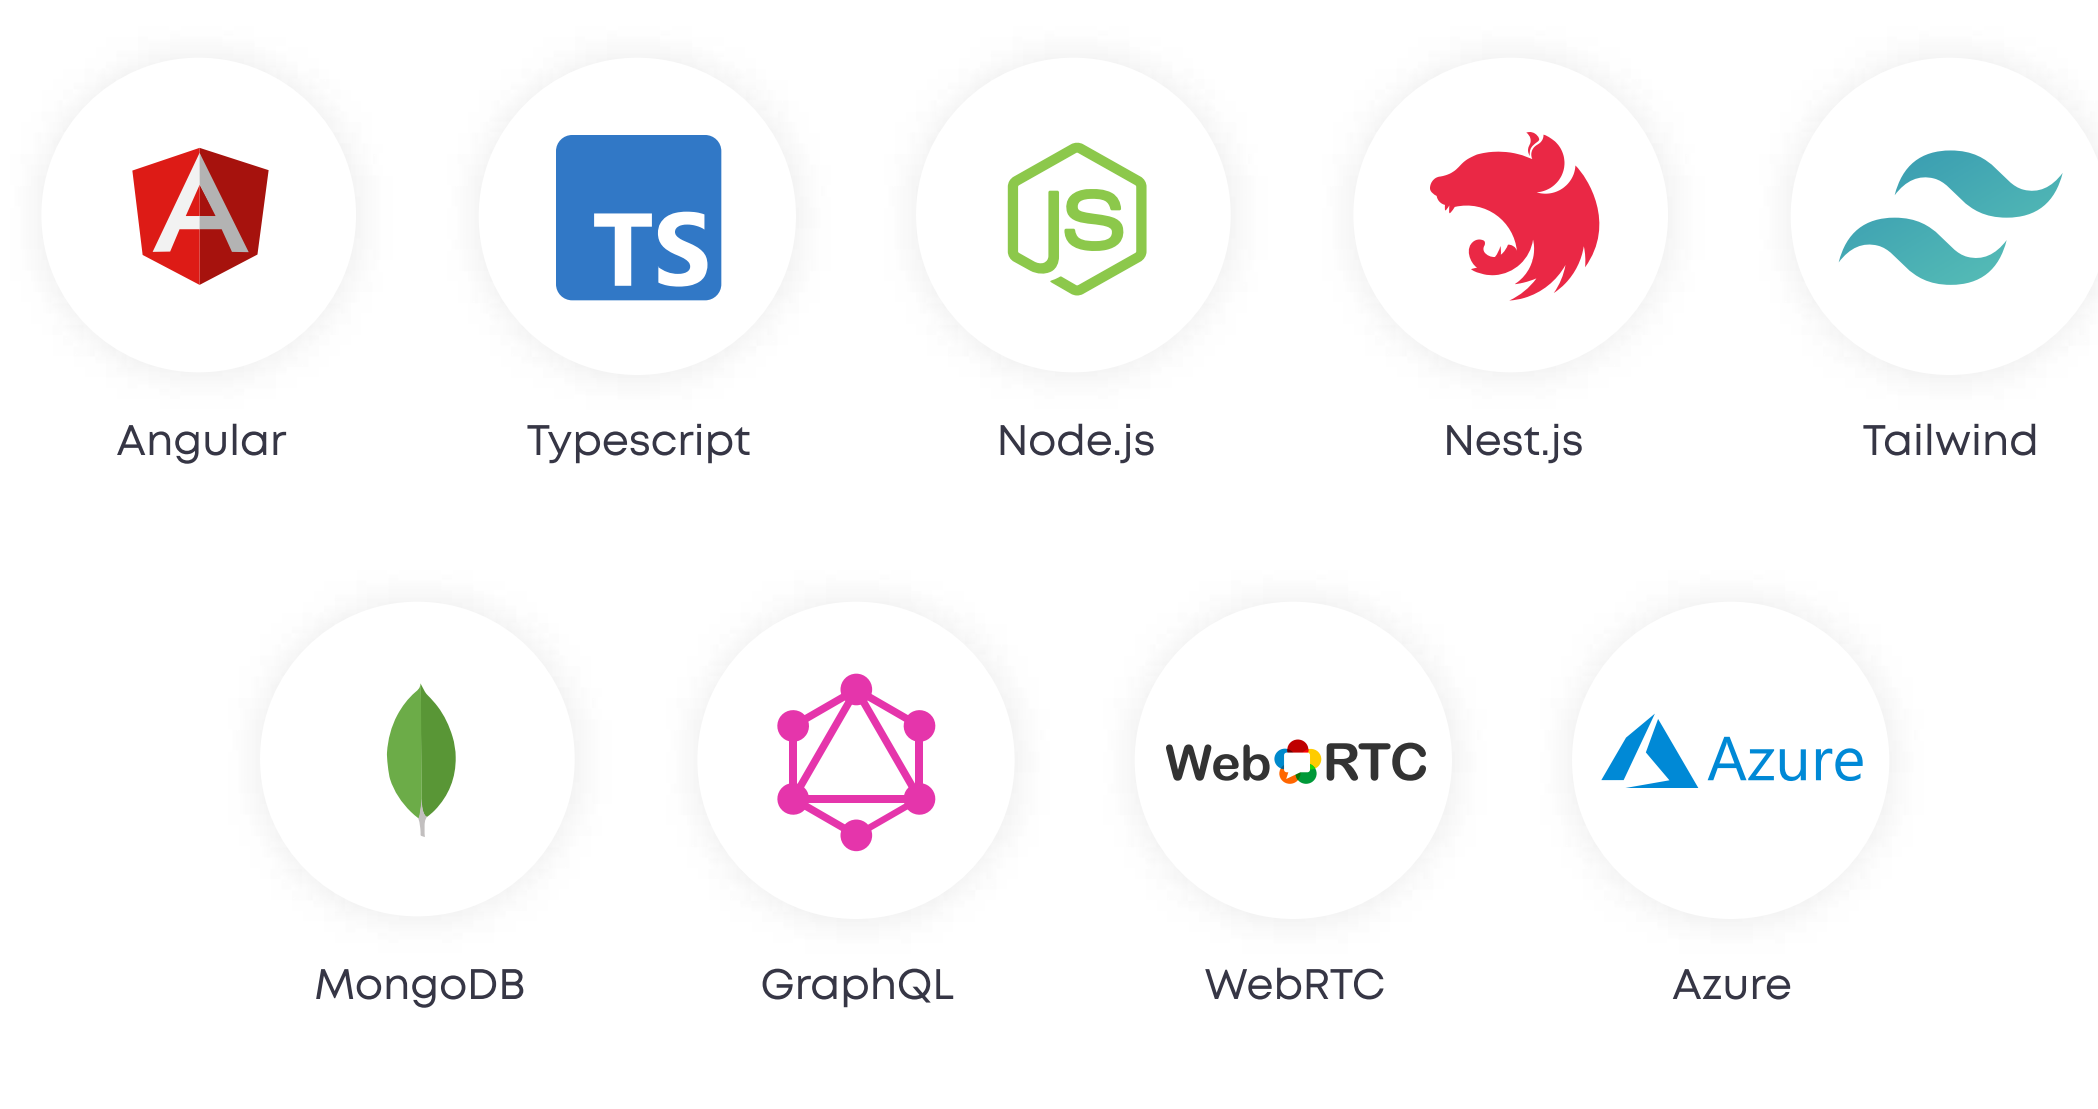

03 Onboarding.

Account creation is undertaken in a few steps that can be done in a minute. The onboarding process is quite easy for users. Their information is then stored securely for all future online visits.

Results

ORIL supported Hypermedica in creating the platform to provide patients with fast, easy, and cost-effective access to a growing network of licensed healthcare providers through multiple platforms: personal computers, mobile devices, health stations and more. As a result, Hypermedica customers are giving testimony of great user experience. Hypermedica is working on expanding its outreach and building partnerships with healthcare providers, provider networks and insurance companies, and expects successful collaboration and future growth through strategic alliances.

Testimonials

Trusted Worldwide: Our Partner's Success Stories.

” We were on a very tight timeline and needed experienced developers that could join our existing team and deliver value immediately. We were able to accomplish our goal with ORIL and continue to succeed thanks to the quality of their services.

Elvis Lopez
